Incident Report Q3 2024

Summary

Three incidents were recorded in the third quarter of 2024. A third disk-full database outage occurred on August 19.

Incident table

ID	Date	Service	Minutes	Root cause
INC-301	2024-07-08	Search	25	Index corruption
INC-302	2024-08-19	Database	120	Disk full
INC-303	2024-09-30	Payments	150	Third-party payment gateway outage

Narrative

The July 8 search incident was caused by corruption of the search index and was fixed by rebuilding it. The August 19 database outage was caused by a log volume filling up, the same class of failure as the two earlier database outages. The September 30 payments incident was caused by an outage at the third-party payment gateway vendor and was outside our control.

Postmortem actions

- Add a fallback payment provider.
- Alert on log volume usage as well as data volume usage.
- Automate database volume expansion.
